# 2 Translation

### 2.1 Type translation

$$\begin{split} \mathcal{K}[\![\mathbb{Z}]\!] & \stackrel{\triangle}{=} & \mathbb{Z} \\ \mathcal{K}[\![\tau_1 \to \tau_2]\!] & \stackrel{\triangle}{=} & \mathcal{K}[\![\tau_1]\!] \to \mathcal{K}_{\mathtt{cont}}[\![\tau_2]\!] \to \mathtt{void} \\ \mathcal{K}_{\mathtt{cont}}[\![\tau]\!] & \stackrel{\triangle}{=} & \mathcal{K}[\![\tau]\!] \to \mathtt{void} \end{split}$$

### 2.2 Program translation

$$\begin{split} \mathcal{K}_{\text{prog}} \llbracket u^{\tau} \rrbracket & \stackrel{\triangle}{=} \quad \mathcal{K}_{\text{exp}} \llbracket u^{\tau} \rrbracket (\lambda x : \mathcal{K} \llbracket \tau \rrbracket . \text{halt} [\mathcal{K} \llbracket \tau \rrbracket ] x^{\mathcal{K} \llbracket \tau \rrbracket})^{\mathcal{K}_{\text{cont}}} \llbracket \tau \rrbracket \\ \mathcal{K}_{\text{exp}} \llbracket y^{\tau} \rrbracket k & \stackrel{\triangle}{=} \quad k(y^{\mathcal{K} \llbracket \tau \rrbracket}) \\ \mathcal{K}_{\text{exp}} \llbracket (i^{\tau} \rrbracket k & \stackrel{\triangle}{=} \quad k(i^{\mathcal{K} \llbracket \tau \rrbracket}) \\ \mathcal{K}_{\text{exp}} \llbracket (\lambda x_1 : \tau_1 . u_2^{\tau_2})^{\tau} \rrbracket k & \stackrel{\triangle}{=} \quad k((\lambda x : \mathcal{K} \llbracket \tau_1 \rrbracket . \lambda c : \mathcal{K}_{\text{cont}} \llbracket \tau_2 \rrbracket . \\ \mathcal{K}_{\text{exp}} \llbracket u_2^{\tau_2} \rrbracket c^{\mathcal{K}_{\text{cont}}} \llbracket \tau_2 \rrbracket )^{\mathcal{K} \llbracket \tau \rrbracket}) \\ \mathcal{K}_{\text{exp}} \llbracket (u_1^{\tau_1} u_2^{\tau_2})^{\tau} \rrbracket k & \stackrel{\triangle}{=} \quad \mathcal{K}_{\text{exp}} \llbracket u_1^{\tau_1} \rrbracket (\lambda x_1 : \mathcal{K} \llbracket \tau_1 \rrbracket . \\ \mathcal{K}_{\text{exp}} \llbracket u_2^{\tau_2} \rrbracket (\lambda x_2 : \mathcal{K} \llbracket \tau_2 \rrbracket . \\ \mathcal{K}_{\text{exp}} \llbracket u_2^{\tau_2} \rrbracket (\lambda x_2 : \mathcal{K} \llbracket \tau_2 \rrbracket . \\ \mathcal{K}_{\text{exp}} \llbracket u_2^{\tau_2} \rrbracket (\lambda x_2 : \mathcal{Z} . \\ \mathcal{K}_{\text{exp}} \llbracket u_2^{\tau_2} \rrbracket (\lambda x_2 : \mathcal{Z} . \\ \mathcal{K}_{\text{exp}} \llbracket u_2^{\tau_2} \rrbracket (\lambda x_2 : \mathcal{Z} . \\ \mathcal{K}_{\text{exp}} \llbracket u_2^{\tau_2} \rrbracket (\lambda x_2 : \mathcal{Z} . \\ \mathcal{K}_{\text{exp}} \llbracket u_2^{\tau_2} \rrbracket (\lambda x_2 : \mathcal{Z} . \\ \mathcal{K}_{\text{exp}} \llbracket u_2^{\tau_2} \rrbracket (\lambda x_2 : \mathcal{Z} . \\ \mathcal{K}_{\text{exp}} \llbracket u_2^{\tau_2} \rrbracket (\lambda x_2 : \mathcal{Z} . \\ \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathcal{Z} . \\ \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathcal{Z} . \\ \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathcal{Z} . \\ \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket )^{\mathcal{K}_{\text{cont}}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket )^{\mathcal{K}_{\text{cont}}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket )^{\mathcal{K}_{\text{cont}}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket )^{\mathcal{K}_{\text{cont}}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket )^{\mathcal{K}_{\text{cont}}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket )^{\mathcal{K}_{\text{cont}}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket )^{\mathcal{K}_{\text{cont}}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket )^{\mathcal{K}_{\text{cont}}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket )^{\mathcal{K}_{\text{cont}}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket )^{\mathcal{K}_{\text{cont}}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket )^{\mathcal{K}_{\text{cont}}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket )^{\mathcal{K}_{\text{cont}}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket )^{\mathcal{K}_{\text{cont}}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket )^{\mathcal{K}_{\text{cont}}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket )^{\mathcal{K}_{\text{cont}}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathcal{K}_{\text{exp}} \llbracket u_2 \rrbracket )^{\mathcal$$

# 3 Type correctness

#### 3.1 Terms

**Lemma 1.**  $\Gamma \vdash_{\mathrm{T}} e : \tau \implies \mathcal{K} \circ \Gamma \vdash_{\mathrm{K}} k : \mathcal{K}_{\mathtt{cont}}[\![\tau]\!] \implies \mathcal{K} \circ \Gamma \vdash_{\mathrm{K}} \mathcal{K}_{\mathtt{exp}}[\![e]\!]k : \mathtt{void}$ 

Proof. T\_ANT\_ANN is the only constructor of the hypothesis. Therefore,

$$e = u^{\tau} \tag{1}$$

$$\Gamma \vdash_{\mathbf{T}} u^{\tau} : \tau \tag{2}$$

We need to show that

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} k : \mathcal{K}_{\mathtt{cont}}[\![\tau]\!] \implies \mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} \mathcal{K}_{\mathtt{exp}}[\![u^{\tau}]\!] k : \mathtt{void}$$

$$\tag{3}$$

By induction on the typing judgement (2):

#### 1. T\_TERM\_VAR

We know that

$$u = x \tag{4}$$

$$\Gamma(x) = \tau \tag{5}$$

$$\mathcal{K} \circ \Gamma \vdash_{K} k : \mathcal{K}[\![\tau]\!] \to \text{void} \tag{6}$$

We need to show that

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} \mathcal{K}_{\exp}[\![x^{\tau}]\!]k : \mathsf{void}$$
 (7)

i.e.

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} k(x^{\mathcal{K}[\![\tau]\!]}) : \mathsf{void}$$
 (8)

By K\_TERM\_APP and typing judgement (6), this follows

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} x^{\mathcal{K}\llbracket\tau\rrbracket} : \mathcal{K}\llbracket\tau\rrbracket \tag{9}$$

By K\_ANT\_ANN, this follows

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} x : \mathcal{K} \llbracket \tau \rrbracket \tag{10}$$

By K\_TERM\_VAR, this follows

$$\mathcal{K} \circ \Gamma(x) = \mathcal{K} \llbracket \tau \rrbracket \tag{11}$$

which is immediate from typing judgement (5).

#### 2. T\_TERM\_INT

We know that

$$u = i \tag{12}$$

$$\tau = \mathbb{Z} \tag{13}$$

$$\mathcal{K} \circ \Gamma \vdash_{K} k : \mathbb{Z} \to \text{void} \tag{14}$$

We need to show that

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} \mathcal{K}_{\exp}[i^{\mathbb{Z}}]k : \text{void}$$
 (15)

i.e.

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} k(i^{\mathcal{K}[\![\mathbb{Z}]\!]}) : \mathsf{void}$$
 (16)

By K\_TERM\_APP and typing judgement (14), this follows

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} i^{\mathcal{K}[\![\mathbb{Z}]\!]} : \mathbb{Z}$$
 (17)

By K\_ANT\_ANN, this follows

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} i : \mathbb{Z} \tag{18}$$

which is immediate from K\_TERM\_INT.

#### 3. T\_TERM\_LAM

We know that

$$u = \lambda x : \tau_1 . e_2 \tag{19}$$

$$\tau = \tau_1 \to \tau_2 \tag{20}$$

$$\Gamma, x : \tau_1 \vdash_{\mathbf{T}} e_2 : \tau_2 \tag{21}$$

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} k : \mathcal{K} \llbracket \tau_1 \to \tau_2 \rrbracket \to \mathsf{void} \tag{22}$$

T\_ANT\_ANN is only constructor of typing judgement (21). Therefore,

$$e_2 = u_2^{\tau_2} \tag{23}$$

$$\Gamma, x : \tau_1 \vdash_{\mathrm{T}} u_2 : \tau_2 \tag{24}$$

We need to show that

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} \mathcal{K}_{\exp}[\![\lambda x : \tau_1.u_2^{\tau_2}]\!]k : \text{void}$$

$$\tag{25}$$

i.e.

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} k((\lambda x : \mathcal{K}[\![\tau_1]\!].\lambda c : \mathcal{K}_{\mathtt{cont}}[\![\tau_2]\!].\mathcal{K}_{\mathtt{exp}}[\![u_2^{\tau_2}]\!] c^{\mathcal{K}_{\mathtt{cont}}[\![\tau_2]\!]})^{\mathcal{K}[\![\tau_1 \to \tau_2]\!]}) : \mathtt{void}$$

$$\tag{26}$$

By K\_TERM\_APP and typing judgement (22), this follows

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} (\lambda x : \mathcal{K}[\![\tau_1]\!].\lambda c : \mathcal{K}_{\mathtt{cont}}[\![\tau_2]\!].\mathcal{K}_{\mathtt{exp}}[\![u_2^{\tau_2}]\!] c^{\mathcal{K}_{\mathtt{cont}}[\![\tau_2]\!]})^{\mathcal{K}[\![\tau_1 \to \tau_2]\!]} : \mathcal{K}[\![\tau_1 \to \tau_2]\!]$$

$$(27)$$

By K\_ANT\_ANN, this follows

$$\mathcal{K} \circ \Gamma \vdash_{\mathsf{K}} \lambda x : \mathcal{K}[\![\tau_1]\!] . \lambda c : \mathcal{K}_{\mathsf{cont}}[\![\tau_2]\!] . \mathcal{K}_{\mathsf{exp}}[\![u_2^{\tau_2}]\!] c^{\mathcal{K}_{\mathsf{cont}}[\![\tau_2]\!]} : \mathcal{K}[\![\tau_1]\!] \to \mathcal{K}_{\mathsf{cont}}[\![\tau_2]\!] \to \mathsf{void}$$

By  $K_{\text{-}}TERM_{\text{-}}LAM$ , this follows

$$\mathcal{K} \circ \Gamma, x : \mathcal{K}[\![\tau_1]\!] \vdash_{\mathcal{K}} \lambda c : \mathcal{K}_{\mathsf{cont}}[\![\tau_2]\!] . \mathcal{K}_{\mathsf{exp}}[\![u_2^{\tau_2}]\!] c^{\mathcal{K}_{\mathsf{cont}}[\![\tau_2]\!]} : \mathcal{K}_{\mathsf{cont}}[\![\tau_2]\!] \to \mathsf{void}$$

$$\tag{29}$$

which follows

$$\mathcal{K} \circ \Gamma, x : \mathcal{K}[\![\tau_1]\!], c : \mathcal{K}_{\texttt{cont}}[\![\tau_2]\!] \vdash_{\mathbf{K}} \mathcal{K}_{\texttt{exp}}[\![u_2^{\tau_2}]\!] c^{\mathcal{K}_{\texttt{cont}}[\![\tau_2]\!]} : \texttt{void}$$

$$\tag{30}$$

which is immediate from K\_ANT\_ANN, K\_TERM\_VAR and the induction hypothesis.

#### 4. T\_TERM\_APP

We know that

$$u = e_1 e_2 \tag{31}$$

$$\Gamma \vdash_{\mathrm{T}} e_1 : \tau_1 \to \tau \tag{32}$$

$$\Gamma \vdash_{\mathbf{T}} e_2 : \tau_1 \tag{33}$$

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} k : \mathcal{K}_{\mathtt{cont}} \llbracket \tau \rrbracket \tag{34}$$

T\_ANT\_ANN is only constructor of typing judgements (32)(33). Therefore,

$$e_1 = u_1^{\tau_1 \to \tau} \tag{35}$$

$$e_2 = u_2^{\tau_1} \tag{36}$$

$$\Gamma \vdash_{\mathbf{T}} u_1 : \tau_1 \to \tau \tag{37}$$

$$\Gamma \vdash_{\mathrm{T}} u_2 : \tau_1 \tag{38}$$

We need to show that

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} \mathcal{K}_{\exp} \llbracket (u_1^{\tau_1 \to \tau} u_2^{\tau_1})^{\tau} \rrbracket k : \mathsf{void}$$
 (39)

i.e.

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} \mathcal{K}_{\exp}\llbracket u_1^{\tau_1 \to \tau} \rrbracket (\lambda x_1 : \mathcal{K}\llbracket \tau_1 \to \tau \rrbracket . \mathcal{K}_{\exp}\llbracket u_2^{\tau_1} \rrbracket (\lambda x_2 : \mathcal{K}\llbracket \tau_1 \rrbracket . x_1^{\mathcal{K}\llbracket \tau_1 \to \tau \rrbracket} x_2^{\mathcal{K}\llbracket \tau_1 \rrbracket} k)^{\mathcal{K}_{\operatorname{cont}}\llbracket \tau_1 \rrbracket})^{\mathcal{K}_{\operatorname{cont}}\llbracket \tau_1 \to \tau \rrbracket} : \operatorname{void} \quad (40)$$

By the induction hypothesis, we need to show that

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} (\lambda x_1 : \mathcal{K}[\![\tau_1 \to \tau]\!] . \mathcal{K}_{\exp}[\![u_2^{\tau_1}]\!] (\lambda x_2 : \mathcal{K}[\![\tau_1]\!]).$$

$$x_1^{\mathcal{K}[\![\tau_1 \to \tau]\!]} x_2^{\mathcal{K}[\![\tau_1]\!]} k)^{\mathcal{K}_{\operatorname{cont}}[\![\tau_1]\!]})^{\mathcal{K}_{\operatorname{cont}}[\![\tau_1 \to \tau]\!]} : \mathcal{K}_{\operatorname{cont}}[\![\tau_1 \to \tau]\!]$$
(41)

By K\_ANT\_ANN, this follows

$$\mathcal{K} \circ \Gamma \vdash_{\mathrm{K}} \lambda u_1 : \mathcal{K}[\![\tau_1 \to \tau]\!]. \mathcal{K}_{\mathrm{exp}}[\![u_2^{\tau_1}]\!] (\lambda x_2 : \mathcal{K}[\![\tau_1]\!]. u_1^{\mathcal{K}[\![\tau_1 \to \tau]\!]} x_2^{\mathcal{K}[\![\tau_1]\!]} k)^{\mathcal{K}_{\mathrm{cont}}[\![\tau_1]\!]} : \mathcal{K}[\![\tau_1 \to \tau]\!] \to \mathrm{void} \quad (42)$$

By  $K_{\text{-}TERM\_LAM}$ , this follows

$$\mathcal{K} \circ \Gamma, x_1 : \mathcal{K}\llbracket \tau_1 \to \tau \rrbracket \vdash_{\mathcal{K}} \mathcal{K}_{\text{exp}}\llbracket u_2^{\tau_1} \rrbracket (\lambda x_2 : \mathcal{K}\llbracket \tau_1 \rrbracket . x_1^{\mathcal{K}\llbracket \tau_1 \to \tau \rrbracket} x_2^{\mathcal{K}\llbracket \tau_1 \rrbracket} k)^{\mathcal{K}_{\text{cont}}\llbracket \tau_1 \rrbracket} : \text{void}$$

$$\tag{43}$$

By the induction hypothesis, we need to show that

$$\mathcal{K} \circ \Gamma, x_1 : \mathcal{K}\llbracket \tau_1 \to \tau \rrbracket \vdash_{\mathrm{K}} (\lambda x_2 : \mathcal{K}\llbracket \tau_1 \rrbracket . x_1^{\mathcal{K}\llbracket \tau_1 \to \tau \rrbracket} x_2^{\mathcal{K}\llbracket \tau_1 \rrbracket} k)^{\mathcal{K}_{\mathsf{cont}}\llbracket \tau_1 \rrbracket} : \mathcal{K}_{\mathsf{cont}}\llbracket \tau_1 \rrbracket$$

$$\tag{44}$$

By  $K_{ANT_ANN}$ , this follows

$$\mathcal{K} \circ \Gamma, x_1 : \mathcal{K}[\![\tau_1 \to \tau]\!] \vdash_{\mathcal{K}} \lambda x_2 : \mathcal{K}[\![\tau_1]\!] . x_1^{\mathcal{K}[\![\tau_1 \to \tau]\!]} x_2^{\mathcal{K}[\![\tau_1]\!]} k : \mathcal{K}[\![\tau_1]\!] \to \text{void}$$

$$\tag{45}$$

By K\_TERM\_LAM, this follows

$$\mathcal{K} \circ \Gamma, x_1 : \mathcal{K}[\![\tau_1 \to \tau]\!], x_2 : \mathcal{K}[\![\tau_1]\!] \vdash_{\mathbf{K}} x_1^{\mathcal{K}[\![\tau_1 \to \tau]\!]} x_2^{\mathcal{K}[\![\tau_1]\!]} k : \text{void}$$

$$\tag{46}$$

which is immediate from K\_TERM\_APP, K\_ANT\_ANN, K\_TERM\_VAR and typing judgement (34).

#### 5. T\_TERM\_PRIM

We know that

$$u = e_1 \ p \ e_2 \tag{47}$$

$$\tau = \mathbb{Z} \tag{48}$$

$$\Gamma \vdash_{\mathrm{T}} e_1 : \mathbb{Z} \tag{49}$$

$$\Gamma \vdash_{\mathrm{T}} e_2 : \mathbb{Z}$$
 (50)

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} k : \mathbb{Z} \to \mathsf{void} \tag{51}$$

T\_ANT\_ANN is only constructor of typing judgement (49)(50). Therefore,

$$e_1 = u_1^{\mathbb{Z}} \tag{52}$$

$$e_2 = u_2^{\mathbb{Z}} \tag{53}$$

$$\Gamma \vdash_{\mathrm{T}} u_1 : \mathbb{Z}$$
 (54)

$$\Gamma \vdash_{\mathrm{T}} u_2 : \mathbb{Z} \tag{55}$$

We need to show that

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} \mathcal{K}_{\text{exp}} \llbracket (u_1^{\mathbb{Z}} \ p \ u_2^{\mathbb{Z}})^{\mathbb{Z}} \rrbracket k : \text{void}$$
 (56)

i.e.

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} \mathcal{K}_{\text{exp}}\llbracket u_1^{\mathbb{Z}} \rrbracket (\lambda x_1 : \mathbb{Z}.\mathcal{K}_{\text{exp}}\llbracket u_2^{\mathbb{Z}} \rrbracket (\lambda x_2 : \mathbb{Z}.\text{let } y = x_1 \ p \ x_2 \text{ in } k(y^{\mathbb{Z}}))^{\mathcal{K}_{\text{cont}}\llbracket \mathbb{Z} \rrbracket})^{\mathcal{K}_{\text{cont}}\llbracket \mathbb{Z} \rrbracket} : \text{void} \qquad (57)$$

By the induction hypothesis, we need to show that

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} (\lambda x_1 : \mathbb{Z}.\mathcal{K}_{\mathsf{exp}}[\![u_2]\!](\lambda x_2 : \mathbb{Z}.\mathsf{let}\ y = x_1\ p\ x_2\ \mathsf{in}\ k(y^{\mathbb{Z}}))^{\mathcal{K}_{\mathsf{cont}}[\![\mathbb{Z}]\!]})^{\mathcal{K}_{\mathsf{cont}}[\![\mathbb{Z}]\!]} : \mathcal{K}_{\mathsf{cont}}[\![\mathbb{Z}]\!]$$
(58)

By K\_ANT\_ANN, this follows

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} \lambda x_1 : \mathbb{Z}.\mathcal{K}_{\exp}\llbracket u_2 \rrbracket (\lambda x_2 : \mathbb{Z}.\mathsf{let}\ y = x_1\ p\ x_2\ \mathsf{in}\ k(y^{\mathbb{Z}}))^{\mathcal{K}_{\mathsf{cont}}\llbracket \mathbb{Z} \rrbracket} : \mathbb{Z} \to \mathsf{void} \tag{59}$$

By K\_TERM\_LAM, this follows

$$\mathcal{K} \circ \Gamma, x_1 : \mathbb{Z} \vdash_{\mathsf{K}} \mathcal{K}_{\mathsf{exp}} \llbracket u_2 \rrbracket (\lambda x_2 : \mathbb{Z}.\mathsf{let} \ y = x_1 \ p \ x_2 \ \mathsf{in} \ k(y^{\mathbb{Z}}))^{\mathcal{K}_{\mathsf{cont}}} \llbracket \mathbb{Z} \rrbracket : \mathsf{void}$$
 (60)

By the induction hypothesis, this follows

$$\mathcal{K} \circ \Gamma, x_1 : \mathbb{Z} \vdash_{\mathbf{K}} (\lambda u_2 : \mathbb{Z}.\mathsf{let} \ y = x_1 \ p \ u_2 \ \mathsf{in} \ k(y^{\mathbb{Z}}))^{\mathcal{K}_{\mathsf{cont}}} [\![\mathbb{Z}]\!] : \mathcal{K}_{\mathsf{cont}} [\![\mathbb{Z}]\!]$$
 (61)

By K\_ANT\_ANN, this follows

$$\mathcal{K} \circ \Gamma, x_1 : \mathbb{Z} \vdash_{\mathsf{K}} \lambda x_2 : \mathbb{Z}.$$
let  $y = x_1 \ p \ x_2 \text{ in } k(y^{\mathbb{Z}}) : \mathbb{Z} \to \text{void}$  (62)

By K\_TERM\_LAM, this follows

$$\mathcal{K} \circ \Gamma, x_1 : \mathbb{Z}, x_2 : \mathbb{Z} \vdash_{\mathsf{K}} \mathsf{let} \ y = x_1 \ p \ x_2 \ \mathsf{in} \ k(y^{\mathbb{Z}}) : \mathsf{void}$$
 (63)

By K\_ANT\_LET, K\_ANT\_PRIM and K\_ANT\_VAR, we need to show that

$$\mathcal{K} \circ \Gamma, x_1 : \mathbb{Z}, x_2 : \mathbb{Z}, y : \mathbb{Z} \vdash_{\mathsf{K}} k(y^{\mathbb{Z}}) : \mathsf{void}$$
 (64)

By K\_TERM\_APP and typing judgement (51), this follows

$$\mathcal{K} \circ \Gamma, x_1 : \mathbb{Z}, x_2 : \mathbb{Z}, y : \mathbb{Z} \vdash_{\mathbf{K}} y^{\mathbb{Z}} : \mathbb{Z}$$

$$(65)$$

which is immediate from K\_ANT\_ANN and K\_ANT\_VAR.

6.  $T_{TERM\_IF0}$  We know that

$$u = if0(e_1, e_2, e_3) \tag{66}$$

$$\Gamma \vdash_{\mathrm{T}} e_1 : \mathbb{Z} \tag{67}$$

$$\Gamma \vdash_{\mathrm{T}} e_2 : \tau \tag{68}$$

$$\Gamma \vdash_{\mathbf{T}} e_3 : \tau$$
 (69)

$$\mathcal{K} \circ \Gamma \vdash_{K} k : \mathcal{K}_{cont}[\![\tau]\!] \tag{70}$$

T\_ANT\_ANN is only constructor of typing judgements (67)(68)(69). Therefore,

$$e_1 = u_1^{\mathbb{Z}} \tag{71}$$

$$e_2 = u_2^{\tau} \tag{72}$$

$$e_3 = u_3^{\tau} \tag{73}$$

$$\Gamma \vdash_{\mathrm{T}} u_1 : \mathbb{Z} \tag{74}$$

$$\Gamma \vdash_{\mathsf{T}} u_2 : \tau \tag{75}$$

$$\Gamma \vdash_{\mathbf{T}} u_3 : \tau \tag{76}$$

We need to show that

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} \mathcal{K}_{\exp} \llbracket \mathsf{if0}(u_1^{\mathbb{Z}}, u_2^{\tau}, u_3^{\tau}) \rrbracket k : \mathsf{void}$$
 (77)

i.e.

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} \mathcal{K}_{\mathsf{exp}} \llbracket u_1^{\mathbb{Z}} \rrbracket (\lambda x : \mathbb{Z}.\mathsf{if0}(x^{\mathbb{Z}}, \mathcal{K}_{\mathsf{exp}} \llbracket u_2^{\mathsf{T}} \rrbracket k, \mathcal{K}_{\mathsf{exp}} \llbracket u_3^{\mathsf{T}} \rrbracket k))^{\mathcal{K}_{\mathsf{cont}}} \llbracket \mathbb{Z} \rrbracket : \mathsf{void}$$
 (78)

By the induction hypothesis, we need to show that

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} (\lambda x : \mathbb{Z}.\mathsf{if0}(x^{\mathbb{Z}}, \mathcal{K}_{\mathsf{exp}}[\![u_2^{\tau}]\!]k, \mathcal{K}_{\mathsf{exp}}[\![u_3^{\tau}]\!]k))^{\mathcal{K}_{\mathsf{cont}}[\![\mathbb{Z}]\!]} : \mathcal{K}_{\mathsf{cont}}[\![\mathbb{Z}]\!]$$

$$\tag{79}$$

By K\_ANT\_ANN, this follows

$$\mathcal{K} \circ \Gamma \vdash_{\mathbf{K}} \lambda x : \mathbb{Z}.\mathsf{if0}(x^{\mathbb{Z}}, \mathcal{K}_{\mathsf{exp}}[\![u_2^{\tau}]\!]k, \mathcal{K}_{\mathsf{exp}}[\![u_3^{\tau}]\!]k) : \mathbb{Z} \to \mathsf{void}$$

$$\tag{80}$$

By K\_TERM\_LAM, this follows

$$\mathcal{K} \circ \Gamma, x : \mathbb{Z} \vdash_{\mathbf{K}} \mathsf{if0}(x^{\mathbb{Z}}, \mathcal{K}_{\mathsf{exp}} \llbracket u_2^{\tau} \rrbracket k, \mathcal{K}_{\mathsf{exp}} \llbracket u_3^{\tau} \rrbracket k) : \mathsf{void}$$
 (81)

By K\_TERM\_IFO, this follows

$$\mathcal{K} \circ \Gamma, x : \mathbb{Z} \vdash_{\mathbf{K}} x^{\mathbb{Z}} : \mathbb{Z} \tag{82}$$

$$\mathcal{K} \circ \Gamma, x : \mathbb{Z} \vdash_{\mathcal{K}} \mathcal{K}_{\text{exp}} \llbracket u_2^{\tau} \rrbracket k : \text{void}$$
(83)

$$\mathcal{K} \circ \Gamma, x : \mathbb{Z} \vdash_{\mathbf{K}} \mathcal{K}_{\exp}[\![u_3^{\tau}]\!]k : \mathsf{void}$$
(84)

in which (82) is immediate from K\_ANT\_ANN and K\_TERM\_VAR. (83)(84) come from the induction hypotheses, K\_ANT\_ANN and typing judgements (70)(75)(76).

#### 3.2 Programs

Theorem 1.  $\vdash_{\mathrm{T}} e : \tau \implies \vdash_{\mathrm{K}} \mathcal{K}_{\mathtt{prog}}\llbracket e \rrbracket : \mathtt{void}$ 

*Proof.* T\_ANT\_ANN is the only constructor of the hypothesis. Therefore,

$$e = u^{\tau} \tag{85}$$

$$\vdash_{\mathbf{T}} u^{\tau} : \tau$$
 (86)

We need to show that

$$\vdash_{\mathrm{K}} \mathcal{K}_{\mathtt{prog}} \llbracket u^{\tau} \rrbracket : \mathtt{void}$$
 (87)

i.e.

$$\vdash_{K} \mathcal{K}_{\exp}[\![u^{\tau}]\!] (\lambda x : \mathcal{K}[\![\tau]\!] . \mathsf{halt}[\![\mathcal{K}[\![\tau]\!]] x^{\mathcal{K}[\![\tau]\!]})^{\mathcal{K}_{\mathsf{cont}}[\![\tau]\!]} : \mathsf{void}$$

$$\tag{88}$$

By Lemma 1, we need to show that

$$\vdash_{K} (\lambda x : \mathcal{K}[\![\tau]\!].\mathsf{halt}[\mathcal{K}[\![\tau]\!]] x^{\mathcal{K}[\![\tau]\!]})^{\mathcal{K}_{\mathsf{cont}}[\![\tau]\!]} : \mathcal{K}_{\mathsf{cont}}[\![\tau]\!]$$
(89)

By K\_ANT\_ANN, this comes from

$$\vdash_{\mathsf{K}} \lambda x : \mathcal{K}\llbracket\tau\rrbracket.\mathsf{halt}[\mathcal{K}\llbracket\tau\rrbracket] x^{\mathcal{K}\llbracket\tau\rrbracket} : \mathcal{K}\llbracket\tau\rrbracket \to \mathsf{void} \tag{90}$$

By K\_TERM\_LAM, this comes from

$$x: \mathcal{K}\llbracket\tau\rrbracket \vdash_{\mathbf{K}} \mathsf{halt}[\mathcal{K}\llbracket\tau\rrbracket] x^{\mathcal{K}\llbracket\tau\rrbracket} : \mathsf{void}$$
 (91)

By K\_TERM\_HALT, this comes from

$$x: \mathcal{K}\llbracket\tau\rrbracket \vdash_{\mathsf{K}} x^{\mathcal{K}\llbracket\tau\rrbracket} : \mathcal{K}\llbracket\tau\rrbracket \tag{92}$$

which is immediate from K\_ANT\_ANN and K\_TERM\_VAR.
